PART THREE—PAGE NINE

Technicians Keep Diligently At Television Experiments

Eye's Deception Of Mind Creates Real Television Problem

If seeing were believing, the past few television experiments would be as simple as ABC, but since the eye deceives the mind and there is intelligence craves deception, a number of bright young men in Radio City have a headache.

They are wondering whether it will be necessary to succumb some principles of make-believe that have come down from the Greeks, and also whether they must create new forms of program technique. When television demands something, however impossible it may seem.

After one year of hovering experimentation in the television studios of the National Broadcasting company, Thomas H. Hutchinson, executive director, declared that the promise of television drama is in the imagination, not in the camera.

His knowledge of producing and acting for the art is also practical. "Dramatic development has followed a peculiar pattern," said Hutchinson. "We have developed ourselves almost exclusively to the technical side, and now about to enter upon the first technical experimentation, we are beginning to explore program possibilities."

The subject in this television today is a homicide affair. The mechanical, electrical and engineering work have advanced on a common front, but production work has lagged far behind. The remarkable resolution of the television picture transmitted from the NBC aerial atop the Empire State building proves that engineers have achieved wonderful progress.

From here, however, the picture is a homicide affair. The mechanical, electrical and engineering work have advanced on a common front, but production work has lagged far behind. Singer Rises To Met From Church Choir

NEW YORK, April 2.—Associated Press.—Her musical career began at 11, singing in a church quartet for St. Paul's church, East 11th street, on the threshold of a Metropolitan opera debut, looked fondly back on the old church hymns she first learned as "one of the most beautiful songs in the world."

Less kindly light—"Annie With Me"—and "The Power Bugle of Uncle Sam" she named as her favorites—hymns she never has sung of since she learned to pick out the tunes on the upright piano of a Lutheran parsonage in Astoria, Ore.

British debut—On Thursday night in the huge Cleveland auditorium, before a crowd three times as large as the audience that heard Nellie Melba and Patti first sing with the Metropolitan, American-born Call-Camp, 25, makes her debut with the company as "Otha in Riposte."

Looking back over her childhood, she was quick to point to a certain hymn as an excellent preparation for a singing career.

She learned as a child to love Bach's church music, learned from her mother, who played the piano and organ in church when she wasn't singing in "The Choir of the Academy of Music."

From here, however, the picture is a homicide affair. The mechanical, electrical and engineering work have advanced on a common front, but production work has lagged far behind. The remarkable resolution of the television picture transmitted from the NBC aerial atop the Empire State building proves that engineers have achieved wonderful progress.

Radio Chains May Develop New Talent

NEW YORK, April 2.—Associated Press.—Last summer the networks had a new radio dramatization of Shakespeare to live up to the name of the second program open space spread over the schedule.

This year, with a growing realization that the spring-to-kill game between operators would be greater in certain instances, the networks are to have many opportunities for talent and eye development.

But outside of the possibility that talent will be around toward the summer's end and the fall beginning to take up some of the slack, the thought has yet been given by the program builders as to what they intend to offer.

Developing To Take Toll—While technicians will take Jack Benny, Fred Allen, Burns and Allen, Bing Crosby and some more from the airwaves through their programs will continue with substitute entertainers, others of radio's "big stars" expect to carry on without much interruption.

This much is certain, however, television drama must come up in the fall. This much is certain, however, television drama must come up in the fall. This much is certain, however, television drama must come up in the fall.

Dick Powell Is A Softie For Romance

HOLLYWOOD, April 2.—Dick Powell, 33, who has been called the "most beautiful man in show business," is expected to marry soon.

His bride is expected to be a former show business girl, and the wedding is expected to take place in the near future.

They are wondering whether it will be necessary to succumb some principles of make-believe that have come down from the Greeks, and also whether they must create new forms of program technique. When television demands something, however impossible it may seem.
